Mobile Security Solution Built
with the **Mobile Worker** in **Mind**

For more than a decade, mobile employees have been working with one hand tied behind their backs. The productivity and bottom-line benefits that mobility originally implied have been cancelled out by overly-restrictive mobile security policies.

Secure.Systems™, a solution offered by SyncDog, removes those limitations, enabling unrestricted, unimpeded, totally secure collaboration between mobile employees and their enterprise ecosystem.

Secure.Systems™ is protected through a FIPS 140-2 compliant, AES 256-bit encrypted app container designed to secure data without any hindrance to application functionality.

The Secure.Systems™ secures data and apps on the device with a NIST-certified, AES 256-bit encrypted connection to your datacenter. For securing your mobile Office 365 or other enterprise app experience there is no more cost-effective and functional product than Secure.Systems™.

SECURE.SYSTEMS

Empower your workforce to stay connected and productive in a secure mobile environment.

- Put a full desktop experience onto your employees mobile devices
- Integrated with Microsoft Office 365
- Containerized, 256 bit encrypted NIST-validated security
- Ideal for Contractors / 3rd parties who need temporary access to data
- Ideal for BYOD or COPE environments requiring separation of work and personal
- Mobile container and the data within can be added or removed in seconds
- Easily integrate with MDM / EMM solutions or stay secure without one
- Simple subscription-based payment mode
- Quick, easy deployment as a managed service
- Ability to easily upgrade or downgrade subscription
- Available on Microsoft Azure, or directly from syncdog.com

Key Benefits - Enable & Empower Your Employees to Do More - Easily and Confidently

Secure.Systems™ comes with integration to a multitude of Enterprise Mobility Management (EMM) systems. With Secure.Systems™, you get a defense-grade containerized workspace that serves as a complementary layer of security to your existing EMM investment.

- The Secure.Systems™ device client can be installed on multiple devices and will sync content between the devices so you can start an e-mail on your iPhone and finish it on your iPad.

- Secure.Systems™ provides both the ability to store and sync documents with a network drive or desktop, as well as open and edit the documents, spreadsheets or slide decks in an Office Suite within Secure.Systems™ workspace.

- Unlike Android for Work or Samsung KNOX, an EMM is not required to manage the Secure.Systems™ workspace. Secure.Systems™ is EMM-agnostic and can be used with an EMM solution or as a standalone solution.

  Secure.Systems™ is a product of SyncDog, Inc. in Reston, Virginia, USA.
