

THE FIRST: Fully Integrated End-to-End Mobile Security Solution

Tired of being chained to your desk?

You need SyncDog's Secure.Systems™. Secure.Systems™ is a mobile security solution built with the mobile worker in mind. Watch to learn how to turn your personal device into a mobile office.

SyncDog provides one fully integrated modular solution that ensures...

- Device Protection
- Anti-Malware/Anti-Phishing
- Email & Data Encryption
- DLP / Dual Persona
- Secure Support for BYOD
- IOS or Android
- Native / Hybrid app store
- Role Based Functionality

Empower Your Mobile Workforce

A single instance of our Secure.Systems™ solution can be utilized across your mobile workforce as well as 3rd party contractors and consultants.

Enable BYOD

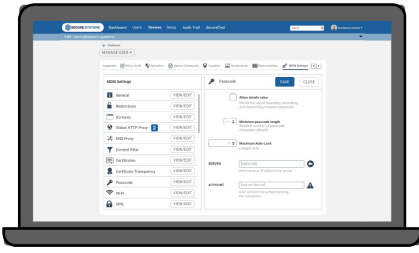

The Secure.Systems™ Workspace provides a secure application platform for employees accessing enterprise mobile productivity apps on BYOD or CYOD (Choose Your Own Device) devices.

Increased Productivity & Security

Our solution finally removes the technological struggle of having to choose between increased security or increased productivity. SyncDog enables you to have both.

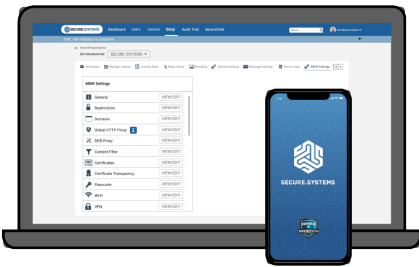

SyncDog, when your old EMM solution just isn't enough!

MOBILE DEVICE MANAGEMENT (MDM)

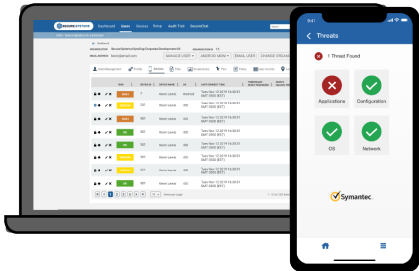

Secure.Systems is a comprehensive mobile device management solution designed to empower your mobile workforce with the power of mobility, by enhancing employee productivity without compromising on corporate security.

With SyncDog we include device tracking, inventory, application distribution, password verification, and enforcement, as well as data encryption.

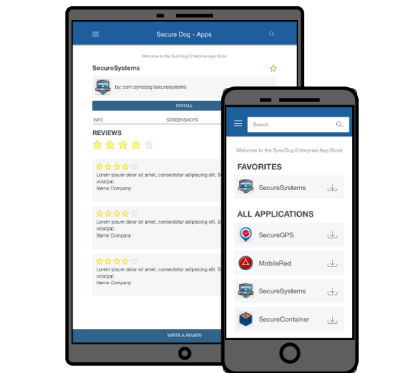

CONTAINERIZATION

Administrators, employees and compliance managers all benefit from the easy management of Secure.Systems™. Privileged users can easily define the security rules within the app and also grant or deny corporate data access privileges on devices. If an employee leaves the company or a device is lost or stolen, corporate data inside the Secure.Systems™ container can be remotely erased without infringing upon the employee's personal data.

MOBILE THREAT DEFENSE

Our partnerships with leading Mobile Threat Defense (MTD) solutions integrated directly into our Secure.Systems platform offers the first fully integrated MTD Solution in the market that enables end-users to remain secure on both managed and unmanaged devices, ensuring they are protected before allowing them to access or download sensitive corporate data.

PRIVATE APP STORE

Our App Store is more than a basic tool for downloading applications. It follows a similar user experience as popular public app stores. Applications come with supporting information, screenshots, and reviews.

We offer clients all the management tools and insight necessary to scale up a secure, App Store-based delivery model for secure enterprise apps, both public and private. Our platform provides a foundation for projecting technology services to mobile devices without sacrificing security, user experience, performance, or ease of management.
